

Chapter 12

Multiple Choice Questions

10. In a blocking system call, the execution of a process is suspended

- A) until the process is woken up by some other process.
- B) until a fixed amount of time has elapsed.
- C) the kernel raises the priority of that process.
- D) the I/O has completed.

11. Buffering in I/O is used to

- A) cope with a speed mismatch between the producer and consumer of a data stream. ✓
- B) provide adaptations for devices that have different data-transfer sizes. ✓ *cope with device transfer size mismatch*
- C) support copy semantics for application I/O. ✓
- D) All of the above.

12. Technique used to improve I/O efficiency by temporarily storing copies of data is called

- A) spooling. : hold output for a device (i.e. printing)
- B) buffering.
- C) caching. : faster device holding copy of data.
- D) memory mapping.

13. Which of the following is NOT a technique used for managing power consumption in mobile devices?

- A) Power collapse. : put a device into very deep sleep
- B) chilling with natural sources such as lake water, and solar panels.
- C) Component level power management. : Android implements this
- D) Wakelocks. : prevent sleep of device when lock is held.
